GROW BETTER LAWNS with BETTER SEEDS

For a finer, smoother lawn, use Wyatt's tested lawn grass mixtures. Listed on the next page we offer mixtures that have been found, in actual field tests, to be the best mixtures for this section of the country.

Select the mixture that suits your soil and conditions best

and you will have taken the most important step in the production of a fine lawn. A good lawn requires constant care so read what we have to say on the next page on "How to Build a Lawn" or write us giving full particulars concerning soil, sun, shade, trees, etc.

Use WYATT'S Selected Lawn Grasses

Wyatt's Lawn Grasses- Fertilizers

Wyatt's Carolina LAWN GRASS MIXTURE

F-60. WYATT'S CAROLINA mixture of lawn grass seeds is an improvement on all of the better mixtures offered heretofore, at comparative prices. Our constant experiments have taught us just what grasses are best suited to the Eastern and Southern states. The finest seeds of these varieties are carefully cleaned and blended into our Carolina mixture so as to give the very best results obtainable. Sow 5 lbs. per 1,000 sq. ft. Read the column "How to make a beautiful Lawn" on this page. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

Wyatt's Colonial LAWN GRASS MIXTURE

F-58. WYATT'S COLONIAL MIXTURE. The continued demand for a mixture of the finer leaved grasses have led us to prepare this Colonial mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher only a fraction of the quantity required of other grasses is required of the Colonial mixture, leaving very little if any difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 2 lbs. per 1,000 sq. ft. Prices: Lb. \$1.25; 2 lbs. \$2.25; 5 lbs. \$5.25; 10 lbs. \$10.00; 25 lbs. or more at 95c per lb., prepaid.

Wyatt's Sunny South LAWN GRASS MIXTURE

F-59. WYATT'S SUNNY-SOUTH MIXTURE. For lighter soils and soils that become extremely dry, and in locations subjected to extreme heat during the summer months Wyatt's Sunny-South mixture of lawn grasses is recommended. The grass varieties used on golf greens over the entire south predominate this mixture. Only the purest stocks are used. Sow 5 lbs. per 1,000 sq. ft. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

Wyatt's Shady Nook LAWN GRASS MIXTURE

F-61. WYATT'S SHADY NOOK LAWN GRASS. A carefully blended mixture of grasses best adapted to shaded situations. Use 5 lbs. per 1,000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional applications of agricultural lime should be made at the rate of 5 to 6 pounds per 100 sq. ft. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

OTHER GRASSES AND CLOVER FOR LAWNS

F-40. KENTUCKY BLUE GRASS. Prefers slightly sweet soil and is best suited to semi-shade. Average soils should be limed for Kentucky Blue. In the South this variety should never be cut shorter than 2 inches. For lawn work we select and offer only the purest seeds obtainable. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.90; 25 lbs. \$7.00; 100 lbs. or more at 27c lb.

F-43. ITALIAN RYE GRASS. Generally referred to as "Winter Grass" in the south where it is grown extensively for winter lawns. It will grow in any soil from early September till June. Sow 10 lbs. per 1,000 sq. ft. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 25 lbs. \$2.75; 50 lbs. \$5.00; 100 lbs. or more at 8½c per lb.

F-52. RED TOP GRASS. A fine leaved grass, member of the bent family, excellent for lawns. Best adapted to moist, heavy soils but grows in all soils. Our extra fancy, heavily cleaned seeds are especially selected for lawns. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.20; 25 lbs. \$5.25; 100 lbs. or more at 19c lb.

F-49. RHODE ISLAND BENT GRASS. Finest of the bents for lawns where it withstands drought and abuse. Use 2 lbs. seeds thoroughly mixed into 5 to 10 lbs. of dried sand, and sow evenly over each 1,000 sq. ft. of lawn area. Prices: Lb. \$1.10; 5 lbs. \$5.00, postpaid. Write for quantity prices.

For other grasses see page 46.

F-80. WYATT'S FANCY WHITE DUTCH CLOVER. Our carefully grown Fancy White Dutch Clover is produced especially for lawns. It is extremely hardy to cold or heat and its even, dwarf habit of growth adds to its value in the lawn. Prices: Lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.50. Write for quantity prices.

F-79. KENTISH WILD WHITE CLOVER. A dwarf spreading and unusually rugged clover especially adapted to lawns and athletic fields. Prices: Lb. \$1.75; 5 lbs. \$7.50, postpaid. Write for quantity prices.

Other clovers listed on page 44.

ALUMINUM SULPHATE

Used 1 lb. to 25 sq. ft. make soils acid for acid loving plants. Mountain Laurel, Rhododendrons, Azaleas, etc. Prices: Lb. 25c; 5 lbs. \$1.00, postpaid. Not prepaid, 1b. 15c; 2 lbs. 25c; 5 lbs. 60c; 10 lbs. \$1.00.

COTTONSEED MEAL

A splendid fertilizer for all kinds of plants. One of the few plant foods that can be used successfully for Azaleas, Rhododendrons. Prices: 5 lbs. 25c; 10 lbs. 40c; 25 lbs. 75c; 50 lbs. \$1.25; 100 lbs. \$2.00. Not prepaid.

L I M E

Finely ground agricultural limestone. Use 10 lbs. per 100 sq. ft. to sweeten acid soils. 100 lb. bag 75c. Write for quantity prices.

PEAT MOSS

For new lawns 1 bale should be thoroughly pulverized and mixed in each 300 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Vigoro or Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold 15 times its own weight in water. Price: Large bale (approximately 20 bus.) \$4.00

RAW BONE MEAL

Excellent for rose beds, flower beds, garden and field crops, and for top-dressing lawns. Prices: 5 lbs. 25c; 10 lbs. 50c; 25 lbs. \$1.00; 100 lbs. \$3.00; 200 lbs. \$5.75. Not prepaid.

SLAG

Ground Basic Slag, while costing only slightly more than lime, is high in Phosphoric Acid in addition to its soil sweetening property. We highly recommend Slag for the building and maintenance of lawns especially for the various Blue grasses and clovers. Slag should be used liberally on all pasture, grain, lespedeza and clover lands. 100 lb. bag \$1.00. Ask for low ton and carlot delivered prices.

SHEEP MANURE

Best of all natural manures, highly concentrated, free from straw and rubbish, with all weed seeds killed. It puts new life into worn out soils.

For lawns use 6 to 10 lbs. to every 100 square feet. For vegetable or flower gardens use 10 to 15 lbs. to every 100 square feet. Prices: 5 lbs. 35c; 10 lbs. 60c; 25 lbs. \$1.00; 50 lbs. \$1.50; 100 lbs. \$2.75; 500 lbs. \$13.00; Ton \$47.50.

TOBACCO DUST

Supplies organic potash and nitrogen. It will increase the value of any chemical fertilizer when used in equal parts. Price: 100 lb. bag \$2.50.

How to make
a BEAUTIFUL
LAWN

The first requisite for a lawn of any kind, be it permanent or merely temporary, is good soil. Good soil from a point of plant growth must have these three vital parts: Plant food, moisture, humus. Most of us are familiar with the first two of these but some of us are not so familiar with the third—humus. Humus is that part of an ideal soil that renders it porous and loamy. It prevents heavy soils from packing or baking and adds "body" to light or sandy soils, thereby increasing their moisture-holding capacity. Therefore, since plant foods must be in a liquid form before they are available to plants, humus is the most important of the three vital parts of an ideal soil. Heavy soils without humus are so tightly packed that they have no room for moisture. Loose sandy or light soils, while having great capacity for moisture, drain so rapidly that they become very dry too often for healthy plant growth. And so we see then that humus added to heavy soil increases its capacity for moisture while preventing its packing or baking and when added to sandy or light soil increases its ability to retain moisture.

Wyatt's Peat Moss, listed on this page, is the finest type of humus available since it is perfectly pure, containing no weed seeds nor harmful bacteria and has a moisture capacity of 15 times its own weight. Where the area is too great to permit the use of commercial peat for humus we recommend successive plantings of cover crops for turning under, legumes much preferred. Humus derived in this manner has the advantage of being much higher in plant food content than commercial peat. A third source for humus is through the use of animal manures. We do not recommend manures unless they are known to be thoroughly rotted and free of weed seeds and harmful bacteria. As the humus diminishes it must be replaced from a compost heap made of leaves from trees or grass clippings or from some equally generous source, and scratched into the lawn from time to time. However, once the soil is well built up with humus and a constant supply for the future is provided the problem of growing a permanent lawn or anything else is solved.

After the soil has been thoroughly broken apply 4 lbs. of Vigoro per 100 sq. ft. Prepare a fine seed bed and allow to settle. The seeds may be sown, on the scarified surface, using 1 pound to each 200 square feet. After seeding the lawn should be rolled. Germination will be hastened if the surface is moistened with a very fine mist from the hose every day until the grass is up. When the lawn is established it should never be sprinkled, but instead soaked once a week.

Established lawns should be fed regularly. 100 lbs. Vigoro or 100 lbs. Sheep Manure thoroughly mixed in 1 bale of peat should be applied as a top dressing to each 2,000 sq. ft. 3 to 4 times each summer followed by an application of 6 lbs. of bone meal per 100 sq. ft. each fall.

TESTED SEEDS

The term "tested seeds" as used in this catalog, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

PRICES

Prices shown on all Seeds, Bulbs, Plants, supplies and materials in this catalog are subject to change at any time. Our catalog must be compiled during the fall months at which time it is impossible to establish prices on all items accurately.

NON WARRANTY

The Job P. Wyatt and Sons Co., give no warranty, express or implied, as to description, quality, productiveness, or other matter of any seeds, bulbs or plants they send out, and they will not be in any way responsible for the crop.

VEGETABLE PLANTING CALENDAR

The chart below lists the more popular vegetables showing approximate dates, space for sowing, depth, etc. The dates for sowing and maturing would, of course, vary with the locality and the depth for sowing varies with soil consistency. The chart should be used as a general guide. We invite correspondence at all times relative to gardening or farming activities and are always glad to furnish any information that may be in our possession.

GARDEN for DEFENSE

It's difficult for us in this land of plenty to become concerned about food shortages—but fresh vegetables and other food crops, will in all probability be scarce and higher during the next few seasons.

At the outset we have to consider the generally short food crops of last season, owing to drought, following which we have the increased demand in the regular markets for all farm products that will be brought on by tremendous governmental expenditures for defense. Add to this the enormous consumption of a daily expanding military camp

in almost every community and it seems to us the logical answer to those who want fresh vegetables for health and economy is a VEGETABLE GARDEN.

Aside from the usual advantages in health and economy derived from gardening you will have lightened the burden of transportation and man power so much needed during the next few months for our defense program.

To begin with—select WYATT'S TESTED SEEDS from this catalog or ask for them at your nearest seed dealers.

27 Bush Bean, Plentiful Bronze Medal winner in the 1938 All-America selections. PLENTIFUL is a green, flat-podded bush bean—an improved and very productive variety of the Bountiful type. The plants bear long, straight, medium deep green pods somewhat larger than those of Bountiful. The attractive pods are well filled, brittle, stringless and uniformly straight. PLENTIFUL shows a definite resistance to wilt. Prices: Pkt. 10c; 1/2 lb. 25c; lb. 40c; 2 lbs. 60c; 5 lbs. \$1.25, postpaid. Not prepaid, 15 lbs. (peck) \$2.40; 60 lbs. 24 Bush Bean, Tendergreen This variety introduced in 1933 was awarded the Gold Medal in All-America selections. Since that time it has more than justified that honor. It is widely acclaimed by home gardeners and commercial growers alike for its productivity, flavor and market acceptance. Plants are erect, medium large with stringless, nearly straight 6 to 6 1/2 inch round, meaty pods. We strongly recommend TENDERGREEN to our most critical growers. Prices: Pkt. 10c; 1/2 lb. 20c; lb. 30c; 2 lbs. 45c; 5 lbs. 95c, postpaid. Not prepaid, 15 lbs. (peck) \$2.10; 60 lbs. (bu.) \$8.40; 100 lbs. or more at 13c lb.

182 Carrot, Imperator Especially adapted to Southeastern soil and climate, this excellent Carrot offers the gardener and trucker many characteristics of superiority: strong tops for bunching, roots smooth, deep rich orange, uniformly tapered to semi-blunt end. The rich orange color extends to the center of the fine-grained tender root. Listed on page 10. Prices: Pkt. 5c; oz. 20c; 1/4 lb. 60c; lb. \$2.00, postpaid.

254 Corn, Golden Cross Bantam Extremely uniform in plant and ear characteristics and in maturity, this is now the most extensively used hybrid. Well suited to canners, market and home gardener's uses. Stalky sturdy, upright, ears 10-14 rowed, kernels rich yellow, medium sized and sweet. Prices: Pkt. 10c; 1/2 lb. 20c; lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20, postpaid. Not prepaid, 10 lbs. \$2.00; 50 lbs. \$9.50; 100 lbs. or more at 18c lb.

257 Corn, Wyatt's Sweet Dent This variety, the result of crossing our fine strain of Trucker's Favorite with real sugar corn, is designed to fill the need of a finer quality of sweet corn for the tables of the South and at the same time withstand the difficulties occasioned in the production of the real sugar corns in many parts of the South. See page 11. Prices: Pkt. 10c; 1/2 lb. 15c; lb. 25c; 2 lbs. 45c; 5 lbs. 95c, postpaid. Not prepaid, 14 lbs. (peck) \$2.00; 56 lbs. (bu.) \$6.25; 100 lbs. or more at 10c lb.

226 Morris Improved Heading Collard This carefully selected strain of the famous Southern vegetable can be depended upon to produce a heavy crop of uniformly tender, tight, cabbage-like heads of fine flavor. Commercial grow-

ers in the South have found ready acceptance wherever this collard has been offered. Use this superior variety for your next crop of collards. Prices: Pkt. 10c; oz. 15c; 1/4 lb. 50c; 1/2 lb. 85c; lb. \$1.50; 5 lbs. \$7.00, postpaid.

287 Cucumber, A. & C. This fine market and table cucumber is rapidly supplanting many of the commercially grown varieties throughout the Southeastern United States and it is grown extensively in Eastern North Carolina. The deep green fruits are slightly tapered, straight and symmetrical. 68 days. Received Special Mention in the All-America selections of 1935. Prices: Pkt. 5c; oz. 10c; 1/4 lb. 35c; lb. \$1.00; 5 lbs. \$4.00, postpaid.

296 Cucumber, Straight 8 Winner of the Gold Medal Award in the All-America selections of 1935, this fine cucumber has become increasingly popular each year. It grows very straight; a long slender fruit slightly tapered at each end. At the edible stage the length is about 8 inches and the color is a rich dark green. Prices: Pkt. 5c; oz. 10c; 1/4 lb. 30c; lb. 90c; 2 lbs. \$1.75; 5 lbs. \$3.50, postpaid.

496 Okra, Clemson Spineless Although okra is primarily a Southern vegetable this variety was awarded the Silver Medal Award of the All-America selections for 1939 after experiment in trials in all parts of the country. Pods are rich green, straight, uniform, ridged and of best quality. The plants are 3 1/2 to 4 feet tall. A spineless Perkins Green Pod type developed from a white podded strain. Prices: Pkt. 5c; oz. 10c; 1/4 lb. 25c; lb. 75c; 2 lbs. \$1.30, postpaid.

WYATT'S CABBAGE SEEDS

Days indicated represent time from setting plants to heading

CULTURE: Plants started in a seed-bed, should not be crowded or they will run up weak and slender and will not endure transplanting well. When 4 to 6 inches high, transplant to open field, setting the plants as deep as the first leaf stems; give frequent and deep cultivation, drawing the earth to the plants at each working. Set the early varieties 18 inches apart in rows 2½ feet; the larger and later sorts, 2 feet apart in 3-foot rows. They need a light and well watered soil, rich in nitrogen. One ounce will produce about 1,500 plants; ½ lb. will produce sufficient plants to set an acre. Thousands of successful growers depend on Wyatt's Tested Cabbage Seed. Be sure to plant the best seed from Wyatt's.

WYATT'S FAR WESTERN GROWN CANTALOUPES

CULTURE: The Melon delights in warm rich soil with perfect drainage, and can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woods-mold and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

WYATT'S PEPPERS

One Ounce of Seed Produces About 1,000 Plants

CULTURE: Sow the seed in hotbed or a window box at a temperature of about 70 degrees on or about February 15. Transplant to the open ground when all danger of frost is over, in rows 3 to 5 feet apart and plants set 15 to 20 inches apart in the row—about 9,000 plants are required to set an acre. Cultivate frequently and keep free from weeds. A mixture of sheep manure and chicken manure is most desirable for distributing in the rows a week or ten days before the plant is set out. When the plants are well set and started at about 7 inches high, guano or any well-rotted manure hoed into the surface soil will also increase plant growth and fruiting qualities.

HERBS FOR BEAUTY - FLAVOR - FRAGRANCE

In Cultivation Before the Christian Era, Herbs Form the Most Fascinating Group of Subjects in Modern Gardening*

For all-round interest most gardeners will admit that the versatility of the aromatic herbs make this group of plants among the most fascinating. A small assortment of herbs will furnish food, flavoring, medicine, fragrance in the garden and in the home, besides their beauty as garden subjects and cut flowers. Herbs thrive in most soils and should be sown early in the spring. Thin out to about one foot apart. Those grown for foliage should be cut before they come into full bloom and hung in bunches or spread thinly where they can dry quickly.

This fascinating study, one that was practised so diligently thousands of years ago—Herb gardening—is once more coming into popularity. Be the first to have a complete herb garden in your neighborhood. Our stock of herb seeds is one of the most complete in America. **A**—annual. **B**—biennials. **P**—perennial.

2245 Zinnia, Wildfire The fantasy type of Zinnia with its friendly informality is certainly maintaining its place as a reigning favorite in the Zinnia family. WILDFIRE adds a distinct note of cheerfulness to the garden and will enliven any home when used in flower arrangements. The plants are neat in habit, strong growing and very free blooming 2 $\frac{1}{2}$ to 3 feet in height and come into flower 45 to 50 days after the seeds are sown.

In growing this or any other zinnia we strongly recommend sowing the seeds where the plants are to bloom if it is at all possible. WILDFIRE is a rich dazzling scarlet, a truly beautiful flower possessing a color and texture rarely found except in zinnias. Pkt. 10c; 3 pkts. 25c.

Wyatt's Giant Imperial Larkspur is equally as hardy as the older strains and can be sown out of doors during the fall or spring with success. Prepare beds with light application of lime. Fertilize with thoroughly rotted manure and Bone Meal. Applications of Vigoro or Bloomaid when the growing season begins will improve the flowers.

MORNING GLORIES

1808 SCARLETT O'HARA. This introduction brings us an entirely new color in this popular garden flower, rich dark wine red or deep rosy crimson. While the flowers are not quite so large as the Heavenly Blue Morning Glories they are of good size, 3 to 4 inches in diameter freely produced on fast growing vines that bloom 65 to 70 days after seeds are sown. The dark green foliage does not make a heavy growth, leaving the plants graceful in appearance. Easiest culture. Pkt. 15c.

1809 HEAVENLY BLUE. A graceful vine of extremely quick growth producing a great number of exquisitely formed deep clear blue petunia-like flowers. Ideal for covering stumps or other unsightly objects. Pkt. 10c; $\frac{1}{4}$ oz. 25c; oz. 75c.

MIGNONETTE

Very popular because of its delightful fragrance. Hardy annual should be sown soon as the ground can be worked. Does not transplant, and should be thinned to stand 6 inches apart.

1790 SWEET. The common variety. Pkt. 10c; $\frac{1}{2}$ oz. 25c; oz. 35c.

1787 MACHET. A very choice large-flowered type. Pkt. 10c; $\frac{1}{4}$ oz. 15c.

IPOMEAS. In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers.

1809 Morning Glory, Heavenly Blue

MARIGOLDS TALL VARIETIES

GIANT PANSIES

1869 Wyatt's
Super Giant
Pansy

Sow seeds in beds or boxes from August to April. Only slight protection is needed in the most extreme weather. When plants have 4 to 5 leaves transplant 8 inches to 1 foot apart in highly manured bed and keep well watered. A fall and spring sowing will produce flowers from December to June.

The immense flowers of this new strain often produce flowers double the size of the ordinary varieties. Wyatt's Super Giant Pansies are borne in profusion on large vigorous plants supporting long strong stems. The rich coloring and great size of the flowers in addition to its prolonged blooming season

will make this new variety a garden favorite and a sure prize winner wherever exhibited. Pkt. 50c; 3 pkts. \$1.25.

1909 Petunia Burgundy

PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

1909 Burgundy Burgundy is one of those rugged individualists of the garden, a strong growing type, with very showy flowers in a shade of deep red which is rather difficult to combine with other colors. Since, however, its own color is so showy in itself, it is well worth growing as an accent or specimen group. Pkt. 25c; 2 pkts. 40c.

1912 Salmon Supreme (1938 Silver Medal winner in the All-America selections.) A new petunia of considerable importance to amateur gardeners and commercial growers alike. WYATT'S SPENCER SWEET PEAS are produced for us under almost perfect growing conditions in the fertile Lompoc Valley in California. As is true of all other Wyatt's seeds, our special strain of Sweet Peas is the very best. Four tremendous ruffled flowers on long stems often 14 inches, clear refined colors and vigorous, long blooming plants are characteristics of all varieties of Wyatt's Sweet Peas.

CULTURE: One ounce will sow from 15 to 20 feet. Sow from November to March. For spring plantings we recommend the sowing of Sweet Pea seeds slightly below the ground level in a bed thoroughly pulverized 2 feet wide by 12 to 18 inches deep. Well rotted (but no other) compost or a liberal sprinkling of Bone Meal might be added when the bed is prepared and when the peas are growing slight applications of Vigoro at 4- to 6-week intervals should be made.

2245 Zinnia Fantasy Wildfire

BRIEF CULTURAL NOTES

ZINNIAS: Zinnias are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost has passed. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3" or 4" tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for several hours so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture. By this method you will have to water Zinnias only once every two weeks or so, whereas if the ground is merely sprinkled, you will have to repeat the sprinkling every other day or so. Irrigation not only gives a stronger, healthier plant, but also saves on your water bill.

CULTURE

No fall flower equals the dahlia in popularity. Plant after the first of May in any average garden soil. About three feet of space is generally needed; some varieties require less. Place tubers flat in holes about six inches deep and fill about half full of soil. Gradually finish filling hole as plant grows. Keep well cultivated. If plants are not pinched after formation of the second pair of leaves, staking is generally necessary. For large flowers leave only one bud to the stem. Dig carefully (do not break root necks) and store in dry sand, sawdust or other similar material in frost-proof place—not too hot—over winter. Roots should be free from excess moisture before storing.

FERTILIZERS

For poor and run-down soils turn under liberal applications of well-rotted stable manure several weeks before planting time. A handful of bone meal per hill or a small amount of a well balanced commercial fertilizer thoroughly mixed with the soil at planting time will aid the growth of the young plant. In rich soils no fertilizer should be applied at planting time. When the plants are about twelve inches high, top dress with a handful of good potato or truck fertilizer per hill, not allowing the fertilizer to come closer to the plant than five or six inches. Repeat this when the buds begin to appear and every three or four weeks during the blooming season until about September 15. Scratch the fertilizer in with a rake or cultivator. Do not over-fertilize with strong nitrogenous fertilizers. Moderate fertilization not only produces good flowers but also produces roots which will keep over winter. For soils of fair fertility, a mixed fertilizer made up of high grade materials, containing 5 per cent nitrogen, 7 to 8 per cent phosphoric acid and 5 to 6 per cent potash, can be generally recommended.

CLOVERS

F78 ALYCE CLOVER

SENSATIONAL NEW FORAGE CROP

Best Southern Summer Legume for Hay, Pasture, Soil-Improvement or Quail Feed; Heat and Drought Resistant

U. S. Department of Agriculture: "Alyce Clover, like soybeans and lespedeza, was introduced from Southern Asia (in 1910), and seems well adapted to the South. Has made a good growth in Louisiana, Mississippi, Texas, Georgia, and Florida. It makes excellent hay, pasture and cover crops. A low spreading, branched, leafy plant, 3 feet tall in thick stands. Cattle are fond of it both green and dry. It is a summer annual, maturing seed in October, and volunteers a good stand the following year. When cut early for hay a second growth will produce a seed crop, 350 to 600 lbs. per acre. Cut hay in early bloom. Rake as soon as drying permits. Dries readily and can be baled the day following harvest. Prefers sandy loams, but has done well on all better grades of general farming lands except very light or wet. Use 200 to 400 lbs. of superphosphate on poor soils. Not sensitive to lime. Plant from spring to July, May or June preferred. Broadcast 10 lbs. of hulled seed per acre on well prepared ground and cover lightly. It is not seriously damaged by any disease or insect." Prices: Lb. 35c; 2 lbs. 65c, postpaid. Not prepaid, 10 lbs. \$2.25; 25 lbs. \$5.25; 100 lbs. or more at 20c lb.

F97 Alfalfa, Kansas Grown

We offer nothing but the very finest grade of genuine Kansas Grown Alfalfa and our seed is usually 99 per cent or better pure Alfalfa. The hay is remarkably palatable and the feeding value worth nearly twice that of the very best Timothy. Droughts have no effect upon Alfalfa, as its roots penetrate to astonishing depths. Alfalfa can be sown in either fall or spring. The cleaner the ground the better the stand will be. Sow on deep, well drained, good loamy land. Alfalfa will not grow on acid soils, and to correct this condition spread 1 to 1 1/2 tons of finely ground lime to the acre after plowing and a few weeks before sowing. Cutting should be done always as blooming begins. Sow 40 lbs. to the acre. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.50; 25 lbs. \$6.00; 100 lbs. or more at 23c lb.

F87 White Blossom Sweet Clover

Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1 1/2 to 2 1/2 feet high, but if cut when 6 inches high it stools out and makes a more tender growth for graz-

ing. Sow 20 lbs. per acre. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.15; 25 lbs. \$2.50; 100 lbs. or more at 9c lb.

F82 Red Clover

99 1/2 per cent pure, dodder free. A valuable firm crop in northern part of the Cotton Belt. Equally good for pasture, hay or soil improvement. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.50; 100 lbs. or more at 17c lb.

F85 Burr Clover Is an annual winter legume, coming from seed each year, and furnishes grazing during the winter. If allowed to go to seed, it will reseed the ground for another winter's grazing. Burr clover at the rate of 20 to 25 lbs. per acre of hulled, recleaned seed to the acre broadcast, or if sown in the burr 60 to 80 lbs. per acre. Prices: Lb. 40c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.75; 100 lbs. or more at 18c lb.

F92 Korean Lespedeza

F80 White Dutch Clover A dwarf clover, green summer and winter. Best for pastures and lawns. Prices: Lb. \$1.00; 5 lbs. \$4.00, postpaid. Write for quantity prices.

F95 Lespedeza, Servicea Scarified and recleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. Prices: Lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$1.85; 25 lbs. \$4.50; 100 lbs. or more at 17c lb.

F93 Kobe Lespedeza A variety particularly adapted to lowlands. Kobe is only about 10 days later than Common and grows fully as tall as Tennessee 76. The leaves and stems are slightly coarser making a heavier hay crop. This variety is being highly recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 25 to 30 lbs. per acre. Write for prices.

F94 Tennessee 76 Lespedeza

The leaves and stems are fine and it produces a great quantity of hay even on poor land. Tennessee 76 grows 12 to 24 inches high and is three weeks later than Common. Sow 25 to 30 pounds per acre. Very scarce. Write for prices.

F92 Korean Lespedeza Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet, and has never been killed by a drought. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is equal to alfalfa in feeding

value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soy beans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed; or wait until seed have formed on bottom branches, which seed shatters to the ground for reseeding. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 25 to 30 pounds of seed per acre. Prices: N. C. Grade No. 1 Korean, 25 lbs. \$2.25; 100 lbs. or more at 8c lb.

N. C. CERTIFIED KOREAN. Prices: 25 lbs. \$2.50; 100 lbs. or more at 9c lb.

F91 Common Lespedeza or Japan Clover It grows on galled hillsides and on all soils, even on the poorest, and being a legume for later crops. Its abundant long taproots and laterals, when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 to 30 lbs. per acre. Very scarce. Write for prices.

Grasses

for HAY and PASTURE

Year 'round grazing in North Carolina is an established fact

F73 Sudan Grass A wonderful quick growing summer hay crop. As big a yielder as Johnson grass, but it has none of the latter's objectionable features, for Sudan grass can never become a pest, as it is an annual. Its greatest value is for hay, which is well liked by stock. The hay is equal to timothy in feeding value. It is also strongly drought resistant. Sow it after the ground becomes thoroughly warm, either broadcast or in rows two feet apart, and cultivate like corn. When sown in rows it grows six to seven feet high; when sown broadcast it grows four to five feet high. Sudan grass may be profitably grown with cowpeas and soybeans, as being of erect growth it supports the pea vines and makes the cutting easier and allows them to cure more quickly; the mixture will give a better-balanced ration than either fed alone. When grown with cowpeas or soy beans make the sowing of Sudan grass after the peas or beans are planted and covered. Almost any soil, from heavy clay to light sand, will grow Sudan grass. Sow 5 to 6 lbs. to the acre in 2-foot rows; 20 to 25 lbs. broadcast. Prices: Lb. 20c; 5 lbs. 55c, postpaid. Not prepaid, 10 lbs. 75c; 25 lbs. \$1.75; 100 lbs. or more at 6c lb.

F43 Italian Rye Grass Grown — Highly recommended for hay crops on rich land. An annual grass with tall, broad flat leaves; very valuable for winter pastures, either alone or in mixtures. Sow 5 lbs. per 1,000 square feet for lawn: 30 to 40 lbs. per acre for pasture. Our seed is thoroughly recleaned and is 98 per cent pure or better. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 90c; 25 lbs. \$2.00; 100 lbs. or more at 7c lb.

F42 Perennial Rye Grass It produces an abundance of foliage that remains bright and green throughout the season, will bear frequent and close cropping, is relished by all kinds of stock, and is not easily injured by trampling. It prefers a stiff wet soil. Prices: Lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.50; 100 lbs. or more at 17½c lb.

F48 Bermuda Grass Makes a vigorous and persistent growth in every part of the South; lasts for years; stands a long, hot summer without injury; grows well in any soil that is not too wet. Sow at the rate of 8 to 10 lbs. to the acre for pasture; 15 to 20 lbs. for lawns and golf courses. Plant from

March until June. Seed will not germinate when ground is cold, and under favorable conditions, takes 30 to 40 days to germinate. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.75; 25 lbs. \$6.50; 100 lbs. or more at 25c lb.

F51 Carpet Grass It is remarkable for its ability to grow on poor sandy soils, thriving far better than Bermuda grass; it thrives vigorously on any kind of soil if moisture conditions are favorable, even if the land is acid, and will furnish more grazing than Bermuda grass. Sow 10 lbs. per acre for pasture and 20 lbs. for lawns. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.60; 25 lbs. \$6.25; 100 lbs. or more at 24c lb.

F55 Timothy A hay grass suitable only for the northern part of the south, especially hill and mountain districts. It is the standard hay crop of the North and makes one of the most popular, nutritious and salable of hay grasses. It does not make such good pasturage but the hay crop is great. Sow 15 lbs. per acre. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.10; 25 lbs. \$2.50; 100 lbs. or more at 8c lb.

F47 Orchard Grass One of our most reliable grasses for the Middle South for hay and pasture. While succeeding well in almost all fertile soils it does best on loamy and moderately stiff uplands. Starts growth very early in the spring and continues well into the winter. It is very easily handled and cured for hay. It is a long-lived grass, with half a chance lasting under good treatment about thirty or forty years; yet it is easily exterminated if the land is wanted for other purposes. Sow about 45 lbs. per acre and cut when in bloom. Prices: Lb. 40c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$3.10; 25 lbs. \$7.50; 100 lbs. or more at 29c lb.

It stands light frosts and does well on most any soil with a plenty of moisture except dry sandy soil. It stands close grazing remarkably well and grows from early spring until killing frost. Sow in March and April. Plant 8 pounds per acre. Prices: Lb. 50c; 5 lbs. \$2.25, postpaid. Not prepaid, 10 lbs. \$4.25; 25 lbs. \$10.25; 100 lbs. or more at 40c lb.

ARE TREATED TO PREVENT WILDFIRE, BLACK FIRE, ANGULAR LEAF SPOT AND OTHER TOBACCO DISEASES.

F252 Certified Virginia Bright Leaf

CULTURE: A very clean piece of land is best for the tobacco plant beds, hence it is customary to burn a piece of land in the woods for plant beds. The seeds are sown about February and protected by plant bed cloth from frost and insects. When large enough and weather is settled (about May), set the plants out in highly manured or fertilized soil in 3½ foot rows, 3 feet between the plants.

F265 YELLOW MAMMOTH. This fine bright leaf tobacco is always in the big money at the market. Our carefully selected strain of Yellow Mammoth is the best that can be bought. Best in light or medium soil.

F261 BONANZA. It has a long, broad leaf placed far apart on the stalk, which admits air and sunlight through the plant, causing uniform ripening.

PRICES: Any of the above varieties of Tobacco. Pkt. 10c; ½ oz. 20c; oz. 35c; 3 ozs. \$1.00; lb. \$3.50, postpaid.

F263 CASH. A tall growing variety, with plenty of space between the leaves to insure a thorough ripening of the entire leaf. The leaves are broad and medium length, yielding a large per cent of the finest cutters and smokers. Best suited for fine, sandy or gray soil.

F269 VIRGINIA BRIGHT LEAF. The finest of all tobaccos for light soils. Heavy producer of highest quality.

F274 WARNE. Has a large leaf of good length and width. Of very fine silky quality.

F262 BROAD LEAF GOOCH. Very broad leaf of medium length.

F272 WYATT'S IMPROVED GOLD LEAF. A splendid combination of size, weight and quality. It has been thoroughly tried out by both growers and manufacturers, and has stood every test and proved one of the best bright Tobaccos. Use medium soil.

WYATT'S N. C. CERTIFIED TOBACCO SEEDS

There is no reasonable argument against the use of Wyatt's North Carolina State Certified Tobacco Seeds when it is taken into consideration that one ounce of Certified seeds will produce enough strong healthy plants to set from one to three acres, and that the seeds have been harvested from only those plants that measure up in every way to the very highest standard set by the North Carolina Crop Improvement Association. The North Carolina Crop Improvement Association has carefully inspected the growing of the crops and the seeds have been tested for 1941. Prices: Oz. \$1.00; 3 ozs. \$2.50, postpaid.

HOW TO ORDER. To avoid any delay, use the order blank. Orders are filled in turn, so book your's in advance, if possible. State second and third choice if you can use other breeds.

Straight orders of one kind are best. Do not order too many different kinds at one time. We do not always have chicks of every breed hatching and this may delay your order. Do not wait until a week before you are ready for the chicks and expect to receive them by return mail, for the wise poultryman has placed his order weeks in advance and is likely to be getting them the same day you want them.

You can use it in very narrow rows—as close as 6 inches. You can use it in 42 to 48 inch rows by closing off the holes in three spouts and distributing through the other three—either on the right or left hand side.

The No. 220 spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel and the weight of the load is placed over the wheel making it easy to push. The No. 220 will distribute 100 to 2,000 pounds of commercial fertilizer to the acre. Quantity per acre is regulated by a notched index on the right hand handle. The shut-off rod is operated from the same point.

NO. 9—PLANET JR. HORSE HOE AND CULTIVATOR

Weight 70 lbs.
Price, \$14.25

These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D. Without wheel. Price, \$12.50.

OLIVER FARM EQUIPMENT

OLIVER TRACTOR DISC HARROW

OLIVER TRACTOR DISC HARROW in 20-disc size is made for use with the small size tractor. It is controlled by the operator of the tractor and in this way requires only one man to operate both tractor and harrow. Built especially durable at each wearing point, easily operated and doing the best possible job of discing—that, in short, is the story of the construction, the operation and the work of the Oliver NTDH Harrow.

Oliver 8 Foot, 24 Tooth Rake

OLIVER SELF DUMP RAKE

THE OLIVER SELF DUMP RAKE is built with a strong rigid frame of hot riveted angle steel. A heavy truss rod runs the entire length of the frame and supports the center of the rake. It is a bridge trussed frame that is built to prevent sagging or twisting.

The rake teeth are lifted, and the hay dumped, by a pair of strong lift rods operating from each wheel. The ends of the lift rods are shaped into pawls to fit into the ratchets in the wheel hubs. The large number of ratchet teeth in the wheel hubs cause the rake to dump, the instant pressure is applied to the foot dump pedal. The rake teeth drop to the ground immediately, without leaving an un-raked strip next to the windrow.

The teeth are made of heat treated high carbon spring steel. They are strong, but have sufficient springiness to prevent breakage when they encounter an obstruction.

The wheels are unusually strong. The concave tires are 1½ inches wide and 54 inches in diameter.

OLIVER STALK CUTTER

OLIVER STALK CUTTER is steel built throughout with heavy angle steel frame and equipped with latest type steel wheel with dust-proof boxing, which makes it one of the strongest and most durable machines on the market, one that has had a thorough test under the most exacting conditions, thereby proving its worth.

Oliver 9 Blade Stalk Cutter

OLIVER MOWER

THE OLIVER MOWER is a fast-cutting, long-lasting machine, in which every part does its share.

The Oliver Mower Frame is strongly built and braced with a solid cross member to the pitman drive end, and braced back again to the tongue. This Big Frame holds the driving parts in rigid alignment and provides the solid base that allows the cutter bar the flexibility it needs, while holding it to its straight cutting line. The Oliver Frame is big, sturdy and solid. It will last and do its work, for many years to come.

In the big frame the full length solid axle runs in long roller bearings, spaced far apart, to give the lightest bearing load, which aids in securing the easiest draft.

All gear teeth of the spur gears, and also the bevel gears are correctly designed to mesh and secure the greatest power with the least loss to play and friction.

The clutch is of the four-jaw dog type, wide on its faces to keep down wear, positive and sure in action. It is controlled by a two pad, double acting foot lever that throws it quickly, either in or out.

No mower has any higher cutter bar speed than the Oliver—many are slower. This higher speed is very essential in cutting wild hay and especially so when mowing roadsides.
